Recommendation

groq is recommended for this task because accuracy and latency were comparable, and it was cheaper at scale. gemini: 80.0% accuracy, 0.8s latency, ~\$0.014/1000 runs; groq: 80.0% accuracy, 0.8s latency, ~\$0.006/1000 runs. This reflects a single run on a small test set; re-test with more and more varied examples before using this for a production decision.
